

Project Design Phase
Proposed Solution Template

Date	15 June 2026
Team ID	Pulkit Khera
Project Name	OnlineComplaintRegistration
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Customers lack a streamlined, transparent method to register and track grievances, leading to frustration and abandoned complaints.
2.	Idea / Solution description	A web-based Online Complaint Registration portal. It features a user-friendly frontend for submitting issues, a Python/Flask backend for automated routing based on issue categories, and an SQL database for secure ticket management and status updates.
3.	Novelty / Uniqueness	Replaces traditional phone queues with a self-service digital dashboard, offering a visual tracking bar.
4.	Social Impact / Customer Satisfaction	Significantly reduces user anxiety and saves time. It builds trust between the consumer and the organization by proving that their voice is being heard and acted upon.
5.	Business Model (Revenue Model)	A B2B Software-as-a-Service (SaaS) model. The system can be licensed to local municipalities, universities, or private businesses via a monthly subscription tier based on the volume of complaints processed.
6.	Scalability of the Solution	The SQL database architecture can scale to handle thousands of concurrent tickets. The modular backend allows for easy integration of future features, such as adding AI-driven FAQ chatbots to deflect common queries.
